TURF AND ORNAMENTAL SYSTEMIC FUNGICIDE

ACTIVE CONSTITUENT: 600 g/L PROPAMOCARB present as the mono-hydrochloride

GROUP 28 FUNGICIDE

1 L  A systemic fungicide for the control of damping-off in ornamental plants, turf and eucalyptus forestry production nurseries caused by Pythium spp., as indicated in the DIRECTIONS FOR USE table.
IMPORTANT: READ THE ATTACHED BOOKLET BEFORE USE.
BANOL TURF AND ORNAMENTAL SYSTEMIC FUNGICIDE
Active Constituent: 600 g/L PROPAMOCARB present as the monohydrochloride

STORAGE AND DISPOSAL
Store in the closed, original container in a cool, well-ventilated area. Do not store for prolonged periods in direct sunlight.
Triple rinse containers before disposal. Add rinsings to spray tank. DO NOT dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush or puncture and deliver empty packaging to an approved waste management facility. DO NOT burn empty containers or product. DO NOT re-use empty containers for any other purpose.

SAFETY DIRECTIONS
Will irritate the eyes and skin. Avoid contact with eyes and skin. Repeated exposure may cause allergic disorders. When opening container and preparing spray wear elbow length PVC gloves. Wash hands after use. After each day’s use, wash gloves.

FIRST AID
If poisoning occurs, contact a doctor or Poisons Information Centre (telephone 13 11 26).

SAFETY DATA SHEET
Additional information is listed in the Safety Data Sheet.

Exclusion of Liability
This product must be used strictly as directed, and in accordance with all instructions appearing on the label and in other reference material. So far as it is lawfully able to do so, Bayer CropScience Pty. Ltd. accepts no liability or responsibility for loss or damage arising from failure to follow such directions and instructions.

APVMA Approval No.: 62826/56056
Banol® is a Registered Trademark of the Bayer Group

BANOL TURF AND ORNAMENTAL SYSTEMIC FUNGICIDE
Active Constituent: 600 g/L PROPAMOCARB present as the monohydrochloride

GROUP 28 FUNGICIDE

A systemic fungicide for the control of damping-off of ornamental plants, turf and forestry nurseries caused by *Pythium* spp., as indicated in the DIRECTIONS FOR USE table.

STORAGE AND DISPOSAL
Store in the closed, original container in a cool, well-ventilated area. Do not store for prolonged periods in direct sunlight.
Triple or preferably pressure rinse containers before disposal. Add rinsings to spray tank. Do not dispose of undiluted chemicals on-site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush, or puncture and bury empty containers in a local authority landfill. If no landfill is available, bury the containers below 500 mm in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots. Empty containers and product should not be burnt. DO NOT re-use empty container for any other purpose.

SAFETY DIRECTIONS
Will irritate the eyes and skin. Avoid contact with eyes and skin. Repeated exposure may cause allergic disorders. When opening container and preparing spray wear elbow length PVC gloves. Wash hands after use. After each day’s use, wash gloves.

FIRST AID
If poisoning occurs, contact a doctor or Poisons Information Centre (telephone 13 11 26).

SAFETY DATA SHEET
Additional information is listed in the Safety Data Sheet.

LIST OF PLANT SPECIES:
Banol has been successfully used at the recommended dosages on the following plants:

Adiantum (pot plants)                  Grevillea spp.
Aechmea spp.                            Gynura
Aeschynanthus spp.                      Hedera helix (ivy)
Ageratum (seed sowing)                  Helichrysum (immortelle)
Alyssum                                 Impatiens
Anemone (see Ranunculus)                Iris
Anthurium spp.                          Kalanchoe
Antirrhinum (snapdragon)                Leptospermum
Aphelandra dania (pot plants)           Lilium
Aralia                                  Lobelia (seed sowing)
Asparagus                               Maranta
Aster (see Callistephus)                Matthiola (stock) (seed sowing)
Azalea                                  Melaleuca spp.
Banksia spp.                            Mesembryanthemum
Begonia spp. (also seed sowing)         Mikania appfolia
Boronia spp.                            Monstera deliciosa
Bromeliads                              Nemesia
Brunfelsia calysina                     Orchids (all common species)
Calceolaria (also see sowing)           Oxalis hedysacharoides rubra
Calendula                               Pachystachys spp.
Callistemon                             Peperomia spp.
Callistephus (summer aster) (seed sowing) Petunia (seed sowing)
Carnation                               Phalaenopsis
Chlorophytum                            Philodendron spp.
Chrysanthemum indicum (also cuttings)   Phlox
Chrysanthemum segetum (seed sowing)     Pilea spp.
Cineraria (see Senecio)                 Polypodium (pot plants)
Clerodendron                             Polycisias (lace aralia)
Clematis                                Primula spp.
Codiaeum variegatum                     Ranunculus (anemone)
Coleus                                  Rosa (seed sowing)
Cyclamen                                Saintpaulia
Delphinium                              Scindapsus or
Dianthus                                 Rhaphidophora
Dieffenbachia                           Senecio cruentus
Dracaena spp.                           Solanum capiscastrum
Erica gracilis                          Streptocarpus
Eucalyptus spp.                         Stroblanthes
Euphorbia pulcherrima spp.              Syngonium
Fatshedera lizei                        Tagetes (seed sowing)
Fatsia japonica                         Tristaniya spp.
Ficus spp.                              Tulipa (tulip)
Fittonia verschaffeltii                 Verbena
Fuchsia                                 Viola tricolour (pansy) (also seed sowing)
Gerbera jamesonii                       Vriesea splendens
Gloxinia                                 Zinnia (seed sowing)
GENERAL INSTRUCTIONS

Fungicide Resistance Warning

Banol is a member of the multi-site activity group of fungicides. For fungicide resistance management Banol is a Group 28 fungicide.

Some naturally occurring fungal populations resistant to Banol and other Group 28 fungicides may exist through normal genetic variability in any fungal population. The resistant individuals can eventually dominate the fungi population if these fungicides are used repeatedly. These resistant fungi will not be controlled by Banol and other Group 28 fungicides, thus resulting in a reduction in efficacy and possible yield loss.

Since the occurrence of resistant fungi is difficult to detect prior to use, Bayer CropScience Pty Ltd accepts no liability for any losses that may result from the failure of Banol to control resistant fungi.

Mixing

This product is completely soluble in water. Simply add the concentrate to the water and stir thoroughly when mixing. The mixture is stable and can be used the following day.

Application Equipment

The product can be applied using a watering can or injection equipment (e.g. Gewa) or any conventional high volume ground spraying equipment calibrated to low pressure pump output. Spray nozzles should be capable of delivering a coarse high volume spray at low pressure, 50 to 100 Kpa.

Compatibility

The product is compatible with most insecticides and fungicides. It is NOT compatible with foliar nutrients.

PRECAUTION

Banol is corrosive to metals and spray residues should be washed out of the spray vat and the spray system with clean water immediately after use.

PROTECTION OF CROPS, NATIVE AND OTHER NON-TARGET PLANTS

Banol has displayed a wide range of safety to ornamental flowers, indoor plants and shrubs. However, if the compound is used repeatedly at short intervals or if it is employed at increased concentration rates, slight necrotic tipping of the cotyledons or of advanced leaves which have stopped growing, may occur.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT

DO NOT contaminate streams, rivers or waterways with product or used containers.

Banol® is a Registered Trademark of the Bayer Group

GHS

May cause an allergic skin reaction.

Avoid breathing spray. Contaminated work clothing should not be allowed out of the workplace. Wear protective gloves. IF ON SKIN: wash with plenty of soap and water. If skin irritation or rash occurs: Get medical advice/attention. Specific treatment: (see Safety Directions and First Aid on this label). Wash contaminated clothing before reuse.

Protection of Crops, Native and Non-target Plants
Do not apply earlier than 5 weeks after sowing.

Protection of Wildlife, Fish, Crustaceans and Environment
Harmful to fish. DO NOT contaminate streams, rivers or waterways with the chemical or used containers.

Storage and Disposal
Store in the closed, original container in a cool, well ventilated area. Do not store for prolonged periods in direct sunlight. Rinse containers before disposal. Add rinsings to spray tank. Do not dispose of undiluted chemicals on site. Dispose of at local authority landfill. If no landfill is available, bury the container below 500 mm in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots. Empty containers and product should not be burnt.

Safety Directions
Will irritate the eyes and skin. Avoid contact with eyes and skin. Do not inhale spray mist. When preparing spray, wear cotton overalls buttoned to the neck and wrist, a washable hat, elbow-length butyl rubber gloves and goggles. If product in eyes, wash it out immediately with water. After use and before eating, drinking or smoking, wash hands, arms and face thoroughly with soap and water. After each day's use, wash gloves, goggles and contaminated clothing.

First Aid
If poisoning occurs, contact a doctor or Poisons Information Centre (Phone Australia: 131126).

Material Safety Data Sheet
Additional information is listed in the Material Safety Data Sheet

Exclusion of Liability
This product must be used strictly as directed, and in accordance with all instructions appearing on the label and in other reference material. So far as it is lawfully able to do so, Bayer CropScience Pty Ltd accepts no liability or responsibility for loss or damage arising from failure to follow such directions and instructions.

Bayfidan® and Baythroid® are Registered Trademarks of Bayer.

**GENERAL INSTRUCTIONS**

**Fungicide Resistance Warning**

Bayfidan Turf Fungicide is a member of the DMI group of fungicides. For fungicide resistance management the product is a Group C fungicide. Some naturally occurring individual fungi resistant to the product and other Group C fungicides may exist through normal genetic variability in any fungal population. The resistant individuals can eventually dominate the fungal population if these fungicides are used repeatedly. These resistant fungi will not be controlled by this product and other Group C fungicides, thus resulting in a reduction in efficacy. Since the occurrence of resistant fungi is difficult to detect prior to use, Bayer CropScience Pty Ltd accepts no liability for any losses that result from failure of this product to control resistant fungi.

**Mixing:** Add the required quantity of Bayfidan to water in the spray vat while stirring or with agitators in motion.

Bayfidan is a broad spectrum, systemic, foliar fungicide that is quickly taken up by plants and translocated within the plant. Bayfidan provides protection on a monthly spray program and acts curatively after infection has taken place. Because of its systemic activity, Bayfidan is less affected by rainfall or irrigation than contact type fungicides.

**Compatibility**

Bayfidan is compatible with Baythroid® Turf Insecticide. The compatibilities given are based on world wide experience and are considered correct. However as changes in climatic conditions can alter the sensitivity of plants to mixtures of sprays, we accept no responsibility for the behaviour of such mixtures.
Storage and disposal
Store in the closed, original container in a cool, well ventilated area. Do not store for prolonged periods in direct sunlight. Rinse containers before disposal. Add rinsings to spray tank. Do not dispose of undiluted chemicals on site. Dispose of at local authority landfill. If no landfill is available, bury the container below 500 mm in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots. Empty containers and product should not be burnt.

Safety Directions
Will irritate the eyes and skin. Avoid contact with eyes and skin. Do not inhale spray mist. When preparing spray, wear cotton overalls buttoned to the neck and wrist, a washable hat, elbow-length butyl rubber gloves and goggles. If product in eyes, wash it out immediately with water. After use and before eating, drinking or smoking, wash hands, arms and face thoroughly with soap and water. After each day’s use, wash gloves, goggles and contaminated clothing.

First Aid
If poisoning occurs, contact a doctor or Poisons Information Centre (Phone Australia: 131126).

<td><strong>For curative treatment:</strong> Apply as a foliar spray and repeat application after 7 to 14 days. For white spot symptoms on couch grass (<em>Cynodon dactylon</em>) only, use higher water volumes of 100 to 150L of water per 100m². <strong>For preventative treatment:</strong> Apply as a high volume foliar spray. Repeat applications at monthly intervals from February to May. This use is subject to an AFRAC anti-resistance strategy. DO NOT apply more than two consecutive sprays of Chipco® GT or related dicarboximide fungicides, unless tank mixed with a fungicide from a different activity group.</td>
</tr>
</tbody>
</table>
GENERAL INSTRUCTIONS

Note: Chipco® GT may be very unstable in conditions where the pH is 7 or higher. It is therefore essential to check the pH of the spray solution before adding Chipco® GT. A suitable registered buffering agent may have to be added to bring pH down below 7.

Application: Good control requires good coverage. Application should be made using sufficient water to ensure thorough coverage.

Turf nutrition:
This product acts very rapidly and where the turf is of a low nutritional status, a slight yellowing may be seen. This will be corrected by nitrogenous fertiliser application. Where possible, it is recommended that the fertiliser program should precede the fungicide application.

Compatibility:
With any mixture, thoroughly agitate immediately before applying. The use of a surfactant or spray oil is not recommended with Chipco® GT as it may result in damage to sensitive plants. DO NOT mix with fertilisers. Mixtures with some fertilisers, e.g. urea, may cause foliar damage. Mixing Chipco® GT with Chipco® Signature Systemic Fungicide may result in some settling out.

As formulations of other manufacturers’ products are beyond the control of Bayer CropScience, all mixtures should be tested prior to mixing commercial quantities.

FUNGICIDE RESISTANCE STRATEGY

For fungicide resistance management Chipco® GT is a Group 2 fungicide. Some naturally occurring individual fungi resistant to Chipco® GT and other Group 2 fungicides may exist through normal genetic variability in any fungal population. The resistant individuals can eventually dominate the fungal population if these fungicides are used repeatedly. These resistant fungi will not be controlled by Chipco® GT and other Group 2 fungicides, thus resulting in a reduction in efficacy. Since the occurrence of resistant fungi is difficult to detect prior to use, Bayer CropScience accepts no liability for any loses that may result from the failure of Chipco® GT to control resistant fungi.

For further information on managing fungicide resistance contact your local supplier or Bayer Environmental Science representative.

PROTECTION OF CROPS, NATIVE AND OTHER NON-TARGET PLANTS
DO NOT apply under weather conditions, or from spraying equipment, that may cause spray to drift onto nearby susceptible plants/crops, cropping lands or pastures.

PROTECTION OF LIVESTOCK
DO NOT graze treated areas or feed turf clippings from treated areas to animals including poultry.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT
DO NOT contaminate streams, rivers or waterways with the chemical or used containers.

STORAGE AND DISPOSAL
Store in the closed, original container in a cool, well-ventilated area. DO NOT store for prolonged periods in direct sunlight.
Triple rinse containers before disposal. Add rinsings to spray tank. DO NOT dispose of undiluted chemicals on-site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush or puncture and deliver empty packaging to an approved waste management facility. If an approved waste management facility is not available bury the empty packaging 500 mm below the surface in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots, in compliance with relevant Local, State or Territory government regulations. DO NOT burn empty containers or product. DO NOT re-use empty containers for any other purpose.
SAFETY DIRECTIONS
Avoid contact with eyes and skin. If product on skin, immediately wash area with soap and water. After use and before eating, drinking or smoking, wash hands, arms and face thoroughly with soap and water.

FIRST AID
If poisoning occurs, contact a doctor or Poisons Information Centre. Phone Australia 13 11 26.

TURF AND ORNAMENTAL FUNGICIDE

ACTIVE CONSTITUENTS: 200 g/L TEBUCONAZOLE
100 g/L TRIFLOXYSTROBIN

GROUP 3 11 FUNGICIDE

* For the control of fungal diseases in turf and ornamentals as per the Directions for Use.

* 500 mL – 3 L
DIRECTIONS FOR USE

RESTRAINTS

SPRAY DRIFT RESTRAINTS

**DO NOT** apply with spray droplets smaller than a **MEDIUM** spray droplet size category according to nozzle manufacturer specifications that refer to ASAE S572 Standard to the BCPC Guideline.

**DO NOT** apply when wind speed is less than 3 or more than 20 kilometres per hour as measured at the application site.

**DO NOT** apply during surface temperature inversion conditions at the application site.

Users of this product **MUST make an accurate written record** of the details of each spray application within 24 hours following application and **KEEP** this record for a minimum of 2 years. The spray application details that must be recorded are:

1. date and start and finish times of application;
2. location address and areas sprayed;
3. full name of this product;
4. amount used per hectare and number of hectares applied to;
5. situation and disease;
6. wind speed and direction during application;
7. air temperature;
8. nozzle brand, model and type and spray system pressure measured during application;
9. name and address of person applying this product.

(Additional record details may be required by the State or Territory where this product is used).

MANDATORY NO-SPRAY ZONES

**DO NOT** apply if there are aquatic and wetland areas, including aquacultural ponds or surface streams and rivers or, within **10 metres** downwind from the application area.

**DO NOT** apply if there are susceptible non-target plants within **15 metres**, downwind from the application area.

**DO NOT** apply if there are livestock, pasture or any land that is producing feed for livestock within **15 metres** downwind from the application area.

</tr>
</tbody>
</table>

**NOT TO BE USED FOR ANY PURPOSE OR IN ANY MANNER CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION**

**WITHHOLDING PERIOD**

DO NOT graze treated turf; or feed turf clippings from any treated area to poultry or livestock.
GENERAL INSTRUCTIONS

APPLICATION

Good control requires good coverage. Application should be made using sufficient water to ensure thorough coverage. For application in turf, use 400-800 L water per ha for foliar or crown diseases such as Dollar Spot, Anthracnose, Brown Patch, Fusarium (Microdochium), Helminthosporium, Leptosphaerulina and Curvularia. Use higher water rates (up to 1600 L per ha) for treatment of soil/root diseases such as Brown Patch, Ectotrophic Root Infecting fungi and Spring Dead Spot.

TURF NUTRITION

This product acts very rapidly and where the turf is of a low nutritional status, a slight yellowing may be seen. This will be corrected by nitrogenous fertiliser application. Where possible, it is recommended that the fertiliser program should precede the fungicide application.

IPM COMPATIBILITY

RISK TO NON-TARGET INSECTS: DEDICATE may have adverse effects on some nontarget beneficial insects, in particular predatory bugs. This risk should be taken into account where Integrated Pest Management utilising these organisms is practised.

RESISTANCE WARNING

The product DEDICATE is a Group 3 & 11 fungicide. Some naturally occurring individual fungi resistant to DEDICATE and other Group 3 & 11 fungicides may exist through normal genetic variability in any fungal population. The resistant individuals can eventually dominate the fungal population if these fungicides are used repeatedly. These resistant fungi will not be controlled by DEDICATE and other Group 3 & 11 fungicides, thus resulting in a reduction in efficacy. Since the occurrence of resistant fungi is difficult to detect prior to use, Bayer accepts no liability for any losses that may result from the failure of DEDICATE to control resistant fungi.

PRECAUTIONS

RE-ENTRY PERIOD FOR TURF

DO NOT allow entry into treated areas until the spray has dried. When prior entry is necessary, wear cotton overalls buttoned to the neck and wrist (or equivalent clothing) and chemical resistant gloves. Clothing must be laundered after each day’s use.

RE-ENTRY PERIOD FOR ORNAMENTALS

DO NOT enter treated areas until spray has dried for low and medium exposure activities such as irrigation, scouting, thinning and weeding of immature/low foliage plants and/or mature/high foliage plants, unless wearing cotton overalls buttoned to the neck and wrist (or equivalent clothing) and chemical-resistant gloves. Clothing must be laundered after each day’s use.

DO NOT enter for five (5) days after application for high exposure activities such as hand harvesting, pruning and pinching, unless wearing cotton overalls buttoned to the neck and wrist (or equivalent clothing) and chemical-resistant gloves. Clothing must be laundered after each day’s use.
PROTECTION OF CROPS, NATIVE AND OTHER NON-TARGET PLANTS

DO NOT apply under weather conditions, or from spraying equipment, that may cause spray to drift onto nearby susceptible plants/crops, cropping lands or pastures.

PROTECTION OF WILDLIFE, FISH, CRUSTACEA AND THE ENVIRONMENT

DO NOT contaminate streams, rivers or waterways with the chemical or used containers.

STORAGE AND DISPOSAL

Store in the closed, original container in a cool, well-ventilated area. DO NOT store for prolonged periods in direct sunlight. Triple or preferably pressure rinse containers before disposal. Add rinsings to spray tank. DO NOT dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush or puncture and deliver empty packaging for appropriate disposal to an approved waste management facility. If an approved waste management facility is not available bury the empty packaging 500mm below the surface in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots, in compliance with relevant Local, State or Territory government regulations. DO NOT burn empty containers or product. DO NOT re-use empty containers for any other purpose.

SAFETY DIRECTIONS

When opening the container and preparing spray and using the prepared spray, wear cotton overalls buttoned to the neck and wrist (or equivalent clothing) and elbow-length chemical resistant gloves. If applying by spraying equipment carried on the back of the user, wear cotton overalls over normal clothing buttoned to the neck and wrist and elbow-length chemical resistant gloves. Wash hands after use. After each day’s use wash gloves and contaminated clothing.

FIRST AID

If poisoning occurs contact a doctor or Poisons Information Centre (ph: 13 11 26).

SAFETY DATA SHEET

Additional information is listed in the Safety Data Sheet.

EXCLUSION OF LIABILITY

This product must be used strictly as directed, and in accordance with all instructions appearing on the label and in other reference material. So far as it is lawfully able to do so, Bayer CropScience Pty Ltd accepts no liability or responsibility for loss or damage from failure to follow such directions and instructions.

Destiny®
Selective Turf Herbicide
ACTIVE CONSTITUENT: 100 g/kg IODOSULFURON-METHYL-SODIUM

GROUP B HERBICIDE

For the post-emergent control of certain broadleaf weeds and grasses in turf and for the suppression of Winter grass and Bahia grass as per the Directions for Use.

Contains 5 x 50 g measure packs which must not be sold separately. DO NOT destroy box while product still remains.

Net contents 250 g
ANCILLARY PANELS

DIRECTIONS FOR USE

RESTRAINTS

DO NOT apply by air or through any type of irrigation equipment.

DO NOT apply to turf which is under stress or which is not yet established.

DO NOT use if rain is expected within 4 hours.

DO NOT use on golf or bowling greens.

DO NOT make more than one application of a group B herbicide in a season except for Bahia grass - refer to Directions for Use table for Bahia grass.

SPRAY DRIFT RESTRAINTS

DO NOT allow spray to drift onto adjacent areas which contain desirable plants.

DO NOT apply with spray droplets smaller than a MEDIUM spray droplet size category according to nozzle manufacturer specifications that refer to the ASAE S572 Standard or the BCPC Guideline.

DO NOT apply when wind speed is less than 3 or more than 20 km per hour as measured at the application site.

DO NOT apply during surface temperature inversion conditions at the application site.

Users of this product MUST make an accurate written record of the details of each spray application within 24 hours following application and KEEP this record for a minimum of 2 years. The spray application details that must be recorded are: 1 date with start and finish times of application; 2 location address and paddock/s sprayed; 3 full name of this product; 4 amount of product used per hectare and number of hectares applied to; 5 crop/situation and weed/pest; 6 wind speed and direction during application; 7 air temperature and relative humidity during application; 8 nozzle brand, type, spray angle, nozzle capacity and spray system pressure measured during application; 9 name and address of person applying this product. (Additional record details may be required by the state or territory where this product is used.)

MANDATORY NO SPRAY ZONE

DO NOT apply if there are sensitive crops, gardens, landscaping vegetation, protected native vegetation or protected animal habitat within 40 metres downwind from the application area.
<table>
<thead>
<tr>
<th>SITUATION</th>
<th>WEED</th>
<th>RATE</th>
<th>CRITICAL COMMENTS</th>

<td>Bahia Grass (Paspalum notatum) suppression and seed head reduction</td>
<td>50 g/ha</td>
<td>Apply during summer when turf is actively growing and Bahia grass produces seed heads. Always apply with a non-ionic surfactant or Hasten\textsuperscript{®} at the recommended rate on the surfactant product label. Apply as soon as seed heads start to form or when it becomes a regular mowing intervention issue. Apply 2-3 times at 4-week intervals after mowing. DO NOT apply more than two consecutive applications per season.</td>
</tr>
</tbody>
</table>

**NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.**
GENERAL INSTRUCTIONS

**Destiny** is a selective sulfonylurea herbicide. It is predominantly a foliar herbicide with less activity via the soil. **Destiny** will not reliably control weeds that emerge after spraying. Results are best under good growing conditions and application to weeds or turf under stress should be avoided.

**Mixing** Ensure that the spray tank is completely clean prior to mixing. Half fill the spray tank with water, then with agitators in motion, add the correct amount of Destiny directly into the spray tank. Then add wetting agent or crop oil as recommended. Complete filling the tank with agitators in motion. Agitation must continue before and during spraying. If pH of water carrier is less than 5.5 use a buffer solution to raise pH to meet 7.0. **DO NOT** mix Destiny with acid forming compounds in the spray vat. **DO NOT** leave spray mix standing in the vat overnight.

**Application** Ensure spraying equipment is properly calibrated before use. Ensure that complete and even spray coverage of all weeds is achieved. **DO NOT** overlap sprayed areas. Apply with the boom no higher than 50 cm above the turf with flat fan nozzles and a medium droplet size.

**Turf Safety** Application to very dry sandy soils followed by soaking rainfall may cause turf damage. Turf damage may also be increased in highly alkaline soils (soil pH >8.5 as determined by soil in water suspension). Avoid application on turf which is not yet established or which is under stress from environmental conditions. Allow at least six weeks between the last application and overseeding with cool season grasses for winter cover.

**Sprayer Clean Up** The sprayer must be thoroughly decontaminated before being used again to spray susceptible plants or turf. Ensure that the following operation is carried out in an area that is clear of waterways, desirable vegetation and tree roots, and preferably in an area where drainings can be contained.

1. Drain sprayer completely and wash out tank, boom and hoses with clean water.
2. Drain again.
3. Fill the tank with clean water and add 300 mL of chlorine bleach (containing 4% chlorine) per 100 L of water with agitation running.
4. Flush some bleach solution through booms and hoses and allow remainder to agitate in tank for 10 minutes.
5. Remove nozzles and filters and leave to soak in a bleach solution of 500 mL per 10 L of water while tank cleaning is in progress.
6. Briefly run the pump at periodic intervals to refresh chlorine solution in spray lines.
7. Drain tank and repeat the procedure of flushing with bleach solution.
8. Flush the tank, boom and hoses with clean water.

**HERBICIDE RESISTANCE WARNING**

**Destiny® Selective Turf Herbicide** is a member of the sulfonylurea group of herbicides and has the inhibitor of ALS mode of action. For weed resistance management **Destiny** is a Group B herbicide. Some naturally-occurring weed biotypes resistant to **Destiny**, and other Group B herbicides, may exist through normal genetic variability in any weed population. These resistant individuals can eventually dominate the weed population if these herbicides are used repeatedly. These resistant weeds will not be controlled by **Destiny** or other Group B herbicides.

**DO NOT** rely exclusively on **Destiny** for weed control. Use as part of an integrated weed management program involving herbicides with other modes of action and non-chemical methods of control. CropLife Australia resistance management strategies are available from your local agricultural chemical supplier. Refer to these strategies for details of how to manage the build-up of resistant weeds in your turf. Since occurrence of resistant weeds is difficult to detect prior to use, Bayer CropScience Pty. Ltd. accepts no liability for any losses that may result from the failure of **Destiny** to control resistant weeds.
PRECAUTIONS

Mowing: Avoid mowing during the 3 to 4 days preceding or following treatment.

RE-ENTRY PERIOD DO NOT allow entry into treated areas until the spray has dried.

PROTECTION OF CROPS, NATIVE AND OTHER NON-TARGET PLANTS Very toxic to aquatic plants and certain algae. DO NOT apply under weather conditions, or from spraying equipment, that may cause spray to drift onto nearby susceptible plants/crops, cropping lands or pastures. DO NOT replant any crop or ornamental to treated areas other than the turf grass listed in the directions for use for a period of 12 months after application. DO NOT use clippings from treated areas for mulch around vegetables or fruit trees.

PROTECTION OF LIVESTOCK DO NOT graze treated turf or feed turf clippings from any treated area to poultry or livestock.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT Keep people and pets off treated areas until spray deposits have dried. DO NOT contaminate streams, rivers or waterways with this product or used containers. DO NOT apply if heavy rain is forecast.

STORAGE AND DISPOSAL Store in the closed, original container in a dry, cool, well-ventilated area out of direct sunlight. Single rinse before disposal. Add rinsings to spray tank. Do not dispose of undiluted chemicals on site. Puncture and bury empty containers in a local authority landfill. If no landfill is available, bury the containers below 500 mm in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots. Empty containers and product should not be burnt.

SAFETY DIRECTIONS Will irritate the eyes. Avoid contact with eyes. When opening the container and preparing spray wear elbow length PVC gloves and goggles. If product in eyes wash it out immediately with water. Wash hands after use. After each day’s use wash gloves and goggles.

FIRST AID If poisoning occurs contact a doctor or Poisons Information Centre (telephone 13 11 26).

SAFETY DATA SHEET Additional Information is listed in the Safety Data Sheet which is available at www.environmentalscience.bayer.com.au.

NOT TO BE USED FOR ANY PURPOSE OR IN ANY MANNER CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION

WITHHOLDING PERIOD
DO NOT graze treated turf or lawn; or feed turf or lawn clippings from any treated area to poultry or livestock.

GENERAL INSTRUCTIONS

Application
Good control requires good coverage. Application should be made using sufficient water to ensure thorough coverage.
IPM Compatibility
Risk to non-target insects: Exteris may have adverse effects on some non-target beneficial insects, in particular predatory bugs (e.g. Orius spp.). Safety to ladybirds and syrphid flies has not been evaluated. This risk should be taken into account where integrated pest management utilising these organisms is practised.

Compatibility
As formulations of other manufacturers’ products are beyond the control of Bayer, all mixtures should be tested prior to mixing commercial quantities.

RESISTANCE WARNING
Exteris Stressgard Turf Fungicide is a combination of a succinate dehydrogenase inhibitor (SDHI) and a quinone outside inhibitor (QoI) fungicide. For fungicide resistance management Exteris Stressgard is both a Group 7 and a Group 11 fungicide. Some naturally occurring individual fungi resistant to Exteris Stressgard and other Group 7 and Group 11 fungicides may exist through normal genetic variability in any fungal population. The resistant individuals can eventually dominate the fungal population if these fungicides are used repeatedly. These resistant fungi will not be controlled by Exteris Stressgard and other Group 7 and Group 11 fungicides, thus resulting in a reduction in efficacy. Since the occurrence of resistant fungi is difficult to detect prior to use, Bayer CropScience Pty Ltd accepts no liability for any losses that may result from the failure of Exteris Stressgard to control resistant fungi.

PRECAUTIONS
Re-entry period Do not allow entry into treated areas until the spray has dried.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT
Very toxic to aquatic life. DO NOT contaminate wetlands or water courses with this product or used containers.

PROTECTION OF LIVESTOCK
DO NOT graze treated turf or lawn; or feed turf or lawn clippings from any treated area to poultry or livestock.

PROTECTION OF CROPS, NATIVE AND OTHER NON-TARGET PLANTS
DO NOT apply under weather conditions, or from spraying equipment, that may cause spray to drift onto nearby susceptible plants/crops, cropping lands or pastures.

STORAGE AND DISPOSAL
Store in the closed, original container in a cool, well-ventilated area. DO NOT store for prolonged periods in direct sunlight. Triple or preferably pressure rinse containers before disposal. Add rinsings to spray tank. DO NOT dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush or puncture and deliver empty packaging for appropriate disposal to an approved waste management facility. If an approved waste management facility is not available bury the empty packaging 500 mm below the surface in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots, in compliance with relevant Local, State or Territory government regulations. DO NOT burn empty containers or product. DO NOT re-use empty containers for any other purpose.

SAFETY DIRECTIONS
May irritate the eyes. Repeated exposure may cause allergic disorders. Avoid contact with eyes. When handling product, wear chemical resistant gloves. Wash hands after use.

FIRST AID
If poisoning occurs, contact a doctor or Poisons Information Centre (telephone 13 11 26)

NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION
GENERAL INSTRUCTIONS:
Initiator tablets are formulated to release active ingredient slowly. Release of active ingredient is dependent on presence of adequate soil moisture. For best results, irrigate the plant after treatment, and ensure that the plant receives regular irrigation for at least 2-3 months after treatment.

FORESTRY APPLICATIONS
Once the seedling has been placed into the planting hole where an Initiator tablet has been applied there is no requirement for any deviation from normal planting practice.

This tablet formulation has been shown to significantly improve growth and establishment rates of eucalypt plantations in areas where insect pests are significant limitations to growth and establishment.

PRODUCTION AND LANDSCAPE ORNAMENTALS
Initiator tablets can be used as directed on the plant species described above in areas such as production and retail nurseries, home gardens and residential complexes; business, office and shopping complexes; golf courses, airports, cemeteries, parks, playgrounds, athletic fields, and other landscaped recreational areas.

INSECTICIDE RESISTANCE WARNING:

GROUP 4A INSECTICIDE

For insecticide resistance management Initiator is a Group 4A insecticide. Some naturally occurring insect biotypes resistant to Initiator and other Group 4A insecticides may exist through normal genetic variability in any insect population. The resistant individuals can eventually dominate the insect population if Initiator or other Group 4A insecticides are used repeatedly. The effectiveness of Initiator on resistant individuals could be significantly reduced. Since the occurrence of resistant individuals is difficult to detect prior to use, Bayer CropScience accepts no liability for any losses that may result from the failure of this product to control resistant insects. Initiator Tablets may be subject to specific resistance management strategies. For further information contact your local supplier or Bayer Environmental Science representative.

PRECAUTIONS
DO NOT allow stock to graze treated trees or pasture adjacent to trees.

PROTECTION OF WILDLIFE, FISH, CRUSTACEA AND ENVIRONMENT
DO NOT contaminate streams, rivers or waterways with the chemical or used containers.
DO NOT leave tablets exposed above ground as they are dangerous to wildlife, particularly birds.

STORAGE AND DISPOSAL
Store in the closed, original container in a dry, cool, well ventilated area out of direct sunlight. Triple rinse container before disposal. Dispose of rinsings in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots. If recycling, replace lid and return clean containers to recycler or designated collection point. If not recycling, break, crush, or puncture and deliver empty packaging to an approved waste management facility. DO NOT burn empty containers or product. DO NOT re-use empty containers for any other purpose.

SAFETY DIRECTIONS
May irritate the eyes and skin. Avoid contact with eyes and skin. Wear rubber gloves. Wash hands after use.

FIRST AID
If poisoning occurs contact a doctor or Poisons Information Centre (131126).

MATERIAL SAFETY DATA SHEET
Additional information is listed in the Material Safety Data Sheet.

DO NOT burn empty containers or product. DO NOT re-use empty containers for any other purpose.

SAFETY DIRECTIONS
May irritate the eyes. When opening the container, mixing and loading and preparing spray and using prepared spray, wear cotton overalls buttoned to the neck and wrist and elbow-length chemical resistant gloves. When using prepared spray by low pressure hand wand, wear cotton overalls, over normal clothing, buttoned to the neck and wrist and a washable hat and elbow-length chemical resistant gloves. If product in eyes, wash it out immediately with water. Wash hands after use. After each day’s use wash gloves and contaminated clothing.

**DIRECTIONS FOR USE**

**SPRAY DRIFT RESTRINTS**

DO NOT apply with spray droplets smaller than a MEDIUM spray droplet size category according to nozzle manufacturer specifications that refer to ASAE S572 Standard to the BCPC Guideline.

DO NOT apply when wind speed is less than 3 or more than 18 kilometres per hour as measured at the application site.

DO NOT apply during surface temperature inversion conditions at the application site.

Users of this product MUST make an accurate written record of the details of each spray application within 24 hours following application and KEEP this record for a minimum of 2 years. The spray application details that must be recorded are:

1. date and start and finish times of application;
2. location address and areas sprayed;
3. full name of this product;
4. amount used per hectare and number of hectares applied to;
5. situation and disease;
6. wind speed and direction during application;
7. air temperature;
8. nozzle brand, model and type and spray system pressure measured during application;
9. name and address of person applying this product.

(Additional record details may be required by the State or Territory where this product is used).

**MANDATORY NO-SPRAY ZONES**

DO NOT apply if there are aquatic and wetland areas, including aquacultural ponds or surface streams and rivers, within 20 metres downwind from the application area.

</tbody>
</table>

**NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.**

**GENERAL INSTRUCTIONS**

**Application**

Good control requires good coverage. Application should be made using sufficient water to ensure thorough coverage.

**Note:** This product may be very unstable in conditions where the pH is 7 or higher. It is therefore essential to check the pH of the spray solution before adding this product. A suitable registered buffering agent may have to be added to bring pH down below 7.

**Turf nutrition**

This product acts very rapidly and where the turf is of a low nutritional status, a slight yellowing may be seen. This effect will be corrected by nitrogenous fertiliser application. Where possible, it is recommended that the fertiliser program should precede the fungicide application.
Compatibility
As formulations of other manufacturers’ products are beyond the control of Bayer, all mixtures should be tested prior to mixing commercial quantities.

RISK TO NON-TARGET INSECTS
Interface® StressGard Turf Fungicide may have adverse effects on some non-target beneficial insects, in particular predatory bugs. This risk should be taken into account where Integrated Pest Management utilising these organisms is practiced.

FUNGICIDE RESISTANCE WARNING
For fungicide resistance management, Interface® StressGard is a Group 2 & 11 fungicide. Some naturally occurring individual fungi resistant to Interface® StressGard and other Group 2 & 11 fungicides may exist through normal genetic variability in any fungal population. The resistant individuals can eventually dominate the fungal population if these fungicides are used repeatedly. These resistant fungi will not be controlled by Interface® StressGard and other Group 2 & 11 fungicides, thus resulting in a reduction in efficacy. Since the occurrence of resistant fungi is difficult to detect prior to use, Bayer accepts no liability for any losses that may result from the failure of Interface® StressGard to control resistant fungi.

PRECAUTIONS
DO NOT apply in areas accessible to children.
DO NOT apply using equipment carried on the back of the user.

RE-ENTRY PERIOD
DO NOT enter treated areas to perform low exposure activities such as irrigation until the spray has dried, unless wearing cotton overalls buttoned to the neck and wrist (or equivalent clothing) and chemical resistant gloves. Clothing must be laundered after each day’s use.

DO NOT enter treated areas to perform high exposure activities such as transplanting and hand weeding for 20 days unless wearing cotton overalls buttoned to the neck and wrist (or equivalent clothing) and chemical resistant gloves. Clothing must be laundered after each day’s use.

PROTECTION OF CROPS, NATIVE AND OTHER NON-TARGET PLANTS
DO NOT apply under weather conditions, or from spraying equipment, that may cause spray to drift onto nearby susceptible plants/crops, cropping lands or pastures.

PROTECTION OF LIVESTOCK
DO NOT graze treated areas or feed turf clippings from treated areas to animals including poultry.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT
Very toxic to aquatic life. DO NOT contaminate wetlands or water courses with this product or used containers.

STORAGE AND DISPOSAL
Store in the closed, original container in a cool, well-ventilated area. DO NOT store for prolonged periods in direct sunlight. Triple or preferably pressure rinse containers before disposal. Add rinsings to spray tank. DO NOT dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush or puncture and deliver empty packaging for appropriate disposal to an approved waste management facility. If an approved waste management facility is not available bury the empty packaging 500 mm below the surface in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots, in compliance with relevant Local, State or Territory government regulations. DO NOT burn empty containers or product. DO NOT re-use empty containers for any other purpose.

SAFETY DIRECTIONS
May irritate the eyes. When opening the container, mixing and loading and preparing spray and using prepared spray, wear cotton overalls buttoned to the neck and wrist and elbow-length chemical resistant gloves. When using prepared spray by low pressure hand wand, wear cotton overalls, over normal clothing, buttoned to the neck and wrist and a washable hat and elbow-length chemical resistant gloves. If product in eyes, wash it out immediately with water. Wash hands after use. After each day’s use wash gloves and contaminated clothing.

</tr>
</tbody>
</table>

**NOT TO BE USED FOR ANY PURPOSE OR IN ANY MANNER CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.**

**GENERAL INSTRUCTIONS**

**30 g only: DIRECTION FOR LOADING RESERVOIRS and OPERATION**

On the handle of the drive rod point the arrow facing up. Pull the drive rod as far as it will go. Attach a pre-filled reservoir of Maxforce Gel to the bait injector with a twist locking movement. Break off and dispose of the plastic tip and attach the dispensing cap. Push the drive rod until the plunger seats against the piston in the reservoir of the gel. Turn the drive rod knob until teeth are facing down and engaging the trigger mechanism (arrow down). Gently squeeze the trigger until the gel flows out.

**30 g only: DIRECTIONS FOR CHANGING RESERVOIRS**

With the arrow on the drive rod pointing up, pull the drive rod out as far as it will go. Remove the empty reservoir, wrap and place in rubbish bin. Reservoirs that still contain gel can be sealed with the supplied cap for further use. To attach a new reservoir, follow the directions above.

**60 g only:** To apply gel, remove the cap on the nozzle, touch the tip to a surface and depress the plunger. Recap the dispenser after treatment is completed.

Maxforce Original Cockroach Gel is an insect stomach poison. The bait will adhere to non-greasy and non-dusty surfaces and will remain pliable and palatable to cockroaches as long as it is visibly present. Re-apply when bait is no longer visibly present, according to the remaining level of infestation. A visible inspection of bait placements is recommended at one month after the initial treatment. Re-application should occur if the bait is visibly depleted. Pest population reduction will be apparent within a week or less. Avoid contact with porous surfaces as the bait may stain.

**INSECTICIDE RESISTANCE WARNING**

For insecticide resistance management Maxforce Original Cockroach Gel is a Group 20 insecticide. Some naturally occurring insect biotypes resistant to Maxforce Original Cockroach Gel and other Group 20 insecticides may exist through normal genetic variability in any insect population. The resistant individuals can eventually dominate the insect population if Maxforce Original Cockroach Gel or other Group 20 is used repeatedly. The effectiveness of Maxforce Original Cockroach Gel on resistant individuals could be significantly reduced.
Since the occurrence of resistant individuals is difficult to detect prior to use, Bayer CropScience Pty Ltd accepts no liability for any losses that may result from failure of Maxforce Original Cockroach Gel to control resistant insects. For further information on managing insecticide resistance contact your local supplier or Bayer Environmental Science representative.

PRECAUTIONS
Avoid contact with food, food utensils or places where food is prepared or stored. Do not apply on food preparation or serving areas. Should not be used in areas accessible to children. Do not use on or around electrical equipment due to the possibility of electric shock. DO NOT apply the product in areas easily accessible to children and animals.

STORAGE AND DISPOSAL
Store in the closed, original container in a dry, cool, well-ventilated area out of direct sunlight. Dispose of used tube by wrapping in paper, placing in plastic bag and putting in garbage.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT
DO NOT contaminate streams, rivers or waterways with the chemical or used containers.

SAFETY DIRECTIONS
Harmful if swallowed. When using the product wear rubber gloves. Wash hands after use. After each day’s use wash gloves.

FIRST AID
If poisoning occurs, contact a doctor or Poisons Information Centre (Phone Australia: 13 11 26; New Zealand 0800 764 766).

MERIT® TURF AND ORNAMENTAL INSECTICIDE
ACTIVE CONSTITUENT: 200 g/L IMIDACLOPRID

For the control of a range of insect pests in turf and ornamental situations as per the Directions for Use.

STORAGE AND DISPOSAL
Store in the closed, original container in a cool, well ventilated area. Do not store for prolonged periods in direct sunlight. Triple-rinse containers before disposal. Add rinsings to spray tank. Do not dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush, or puncture and deliver empty packaging to an approved waste management facility. If an approved waste management facility is not available, bury the empty packaging 500 mm below the surface in a disposal pit specifically marked and set up for this purpose, clear of waterways, desirable vegetation and tree roots, in compliance with relevant local, state or territory government regulations. Do not burn empty containers or product. Do not reuse empty containers for any other purpose.

SAFETY DIRECTIONS
Harmful if swallowed. May irritate the eyes and skin. Repeated exposure may cause allergic disorders. Avoid contact with eyes and skin. When preparing product for use, wear cotton overalls buttoned to the neck and wrist and a washable hat, elbow-length PVC gloves and goggles. Wash hands after use. After each day's use, wash gloves, goggles and contaminated clothing.

FIRST AID
If poisoning occurs contact a doctor or Poisons Information Centre (ph. 131126).

SAFETY DATA SHEET
Additional Information is listed in the Safety Data Sheet which is available at www.environmentalscience.bayer.com.au.

Exclusion of Liability

</thead>
<tbody>
<tr>
<td>Elm</td>
<td>Elm leaf beetle</td>
<td>7 mL/25 mm of tree diameter</td>
<td>Use as a soil drench application. Mix the required dose in sufficient water to adequately treat each tree. Use at least 50 L of mix per tree up to a tree diameter of 400-500 mm and then 100 L per tree for larger trees. Inject mix to a depth of 20-30 cm in a minimum of 4 injection sites per tree, 0.75 to 1.5 m apart, arranged in an evenly spaced grid to just beyond the drip line. Ensure root zone is adequately moist with active root growth. Keep treated area moist for 7-10 days after treatment. Treat at least 6-10 weeks prior to pest attack in late winter or early spring when roots are active. DO NOT treat if soil is waterlogged.</td>
</tr>
<tr>
<td>Seedling eucalypts (to 1 m high)</td>
<td>Chrysomelid beetle larvae, Psyllids</td>
<td>2.5 mL/plant</td>
<td>Mix in water up to 0.5 L per 3 L pot and apply to soil. Use less water for smaller pots. DO NOT dilute to the point where mix runs out the bottom of pots.</td>
</tr>
<tr>
<td>Azaleas in pots</td>
<td>Azalea lace bug</td>
<td>3.5 mL/250 mL water/pot</td>
<td>Use as a soil drench for pots up to 20 L capacity.</td>
</tr>
<tr>
<td>Ornamentals in pots</td>
<td>Scarab beetle larvae</td>
<td>3.5 mL/5 L water</td>
<td>Use as a soil drench. 5 L of mixture will treat twenty 6 L pots.</td>
</tr>
<tr>
<td>Roses</td>
<td>Aphids</td>
<td>3.5 mL/2 L water/plant</td>
<td>Use as a soil drench by pouring mixture evenly around drip zone. Use this rate for plants up to 1 m high. For each additional metre of plant height, add 2 mL extra of MERIT to the 2 L of water.</td>
</tr>
</tbody>
</table>

For soil drench treatments, remove mulch and dead vegetation, and moisten the soil surface first. Apply the Merit mixture, then water it in well immediately after application.

**NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION**

**GENERAL INSTRUCTIONS**

**MIXING**

Prior to pouring, shake container vigorously then add the required quantity of MERIT to water in the spray vat while stirring or with agitators in motion.

MERIT may be mixed in the spray tank with TEMPO XTRA Turf and Ornamental Insecticide. Follow the use rates on the TEMPO XTRA label when using this product in a tank mix with TEMPO XTRA.

MERIT is compatible with various fungicides, insecticides, herbicides and soil wetting agents. As formulations of other manufacturers’ products are beyond the control of Bayer CropScience Pty Ltd, all mixtures should be tested prior to mixing commercial quantities. Merit should not be mixed with fertilisers.
INSECTICIDE RESISTANCE WARNING

GROUP 4A INSECTICIDE

For insecticide resistance management MERIT is a Group 4A insecticide. Some naturally occurring insect biotypes resistant to MERIT and other Group 4A insecticides may exist through normal genetic variability in any insect population. The resistant individuals can eventually dominate the insect population if MERIT or other Group 4A insecticides are used repeatedly. The effectiveness of MERIT on resistant individuals could be significantly reduced. Since the occurrence of resistant individuals is difficult to detect prior to use, Bayer CropScience accepts no liability for any losses that may result from the failure of this product to control resistant insects. MERIT may be subject to specific resistance management strategies. For further information contact your local supplier or Bayer Environmental Science representative.

Insecticide Resistance Management Strategy for aphids other than green peach aphid, whitefly and melon thrips: DO NOT apply MERIT in consecutive sprays. Rotate with registered insecticides from other groups.

Confined environments such as glasshouses: Annuals: DO NOT apply more than one spray of MERIT to any one crop. Perennials: Rotate with registered insecticides from other groups. Use a maximum of three sprays in any 12 month period.

PRECAUTIONS

Note on Ornamentals
MERIT has been used on a wide range of ornamental plant species without damage. However, some species and varieties are particularly sensitive to chemical sprays and as this is often related to local conditions it is advisable to treat only a small number of plants first, in order to ascertain their reaction before treating the whole crop.

PROTECTION OF LIVESTOCK
Dangerous to bees. DO NOT spray any plants in flower while bees are foraging. DO NOT graze treated turf or feed turf clippings from any treated area to poultry or livestock.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT
DO NOT contaminate streams, rivers or waterways with the chemical or used containers.

NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.

GENERAL INSTRUCTIONS

RESERVE STRESSGARD is a protectant fungicide for the control of fungal diseases in turf. For effective disease control a good leaf cover must be achieved before a widespread disease outbreak occurs.

MIXING

Thoroughly shake and invert the pack several times before opening. Half-fill spray tank and with agitation system running, add the required about of product.

APPLICATION RATES PER HECTARE

Low volume: $\geq$ 200 L/ha

High volume: $\geq$ 500 L/ha

The volume of water applied should increase as the plants grow in size to maintain adequate cover.

COMPATIBILITY

This product is compatible with wettable powder and suspension concentrate formulations of most commonly used fungicides, insecticides and miticides. Unless experience in your area has shown other combinations to be physically compatible and non-injurious to your crop, do not combine with other chemicals, especially oil-based emulsifiable or suspension concentrate pesticides. This product should not be mixed with spraying oils or sprayed onto plants that have been sprayed with oil for at least 10 days after the last spray.

WETTING AGENTS

The addition of surfactants does not improve this product's efficacy and under some conditions may cause plant injury.
FUNGICIDE RESISTANCE WARNING

GROUP M5 FUNGICIDE

RESERVE STRESSGARD is a member of the multi-site activity group of fungicides. For fungicide resistance management, this product is a Group M5 fungicide. Some naturally occurring individual fungi resistant to this product and other Group M5 fungicides may exist through normal genetic variability in any fungal population. The resistant individuals can eventually dominate the fungal population if these fungicides are used repeatedly. These resistant fungi will not be controlled by this product or other Group M5 fungicides, thus resulting in a reduction in efficacy. Since the occurrence of resistant fungi is difficult to detect prior to use, Bayer CropScience Pty Ltd accepts no liability for any losses that may result from the failure of this product to control resistant fungi.

PROTECTION OF LIVESTOCK

DO NOT contaminate feed or foodstuffs with this product of empty containers.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT

Dangerous to fish. DO NOT contaminate streams, rivers or watercourses with the chemical or used containers.

STORAGE AND DISPOSAL

Store in the closed, original container in a cool, well-ventilated area. Do not store for prolonged periods in direct sunlight. Triple-rinse containers before disposal. Add rinsings to spray tank. Do not dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush, or puncture and deliver empty packaging to an approved waste management facility. If an approved waste management facility is not available, bury the empty packaging 500 mm below the surface in a disposal pit specifically marked and set up for this purpose, clear of waterways, desirable vegetation and tree roots, in compliance with relevant local, state or territory government regulations. Do not burn empty containers or product. DO NOT re-use empty container for any other purpose.

SAFETY DIRECTIONS

Attacks eyes and skin. Avoid contact with eyes and skin. Do not inhale spray mist. Repeated exposure may cause allergic disorders. Sensitive workers should use protective clothing. When preparing spray and using the prepared spray wear cotton overalls buttoned to the neck and wrist and a washable hat, elbow-length PVC gloves and goggles and disposable mist face mask covering mouth and nose. If clothing becomes contaminated with product or wet with spray remove clothing immediately. If product on skin, immediately wash area with soap and water. If product in eyes, wash it out immediately with water. After use and before eating, drinking or smoking, wash hands, arms and face thoroughly with soap and water. After each day's use, wash gloves, goggles and contaminated clothing.

FIRST AID

If poisoning occurs, contact a doctor or Poisons Information Centre. Phone Australia 13 11 26. If swallowed, do not induce vomiting. Give a glass of water.
SAFETY DATA SHEET

Additional information is listed in the Safety Data Sheet which may be found at www.environmentalscience.bayer.com.au.

EXCLUSION OF LIABILITY

This product must be used strictly as directed, and in accordance with all instructions appearing on the label and in other reference material. So far as it is lawfully able to do so, Bayer CropScience Pty Ltd accepts no liability or responsibility for loss or damage arising from failure to follow such directions and instructions.

Apply prior to germination of the weeds (usually from late summer to mid-autumn, February to May, and early spring, August to October).

DO NOT apply on turf containing Carpet Grass (Axonopus spp.), Centipede Grass (Eremochloa ophiuroides) and Dichondra unless some damage is acceptable. Avoid contact with flowers and shrubs except as directed elsewhere in this document. Owing to the varying cultivation practices used, it is not recommended to apply this product on putting greens and bowling greens. Refer to the General Instructions for more details on application and plant back periods.

NOT TO BE USED FOR ANY PURPOSE OR IN ANY MANNER CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION

GENERAL INSTRUCTIONS

This product is a pre-emergent herbicide. Control of germinating weed seedlings can be expected for up to 10 weeks after application.

NOTE ON ORNAMENTALS: Ronstar Turf and Ornamental has been used on a wide range of ornamental plant species without damage. However, some species and varieties are particularly sensitive to chemical products. As this sensitivity could be related to local conditions, it is advisable to treat only a small number of plants first, in order to determine their reaction to the product, before treating a whole crop.

Tolerant Nursery Species: Some of the species of the genera listed below have been shown to tolerate Ronstar Turf and Ornamental at a dose rate of 20 g per square metre.

| Abelia | Bauhinia | Cuphea | Hakea | Kunzea | Metrosideros | Ravenala  
| Acacia | Boronia | Cupressus | Hebe | Lagerstroemia | Monstera | Rosa  
| Acalypha | Browallia | Dampiera | Helichrysum | Lantana | Nerium | Rosmarinus  
| Agapanthus | Callistemon | Dodonaea | perennial) | Lavandula | Omolanthus | Russelia  
| Agonis | Callitris | Eriostemon | Hemiandra | Lea | Pandorea | Schefflera  
| Allamanda | Camellia | Escallonia | Hibbertia | Leptospermum | Phoenix | Sollya  
| Ardisia | Chamelaucium | Eucalyptus | Ixora | Leucodendron | Pho tinia | Viburnum  
| Araucaria | Coleonema | Eutaxia | Jasminum | Leucospermum | Prostanthera | Weigela  
| Azalea | Coprosma | Gardenia | Juniperus | Macrozamia | Protea | Westringia  
| Banksia | Cotoneaster | Grevillea | Kennedia | Melaleuca |

APPLICATION: Apply using a properly calibrated granular applicator which will apply the granules in a uniform pattern. Uniform application is essential for satisfactory weed control. Calibrate the applicator prior to use according to the manufacturer's instructions, and check applicator frequently to ensure that the equipment is working properly. After application, ensure granules are washed or brushed off the foliage, particularly the foliage of prostrate and dense ground-cover plants. DO NOT apply granules when foliage is wet.

Turf: As above. Ensure that the turf area is free of leaves and other debris, mowing if necessary, so that the granules reach the soil surface. Measure the area to be treated and apply the required amount using a properly calibrated granular applicator as above. Oscillating spout and rotary type fertilizer spreaders are recommended for large areas. Activity of this product is dependent on moist soil conditions. If rain is not received within 2 days after application, apply thorough sprinkler irrigation to wash granules off the leaves and help distribute the granules on the soil surface.

DO NOT apply granules when the turf foliage is wet.
If the soil is to be top-dressed with fertilizer, DO NOT apply this product until the top-dressing operation is completed.

**Plant-Back Periods**
- Ryegrass: Allow four months after last application to lapse before reseeding.
- Bentgrass: Allow five months after last application to lapse before reseeding.

**RESISTANT WEEDS WARNING GROUP G HERBICIDE**

Ronstar Turf and Ornamental Selective Herbicide is a member of the Oxidiazole group of herbicides. Ronstar Turf and Ornamental has the inhibitors of protoporphyrinogen oxidase mode of action. For weed resistance management, Ronstar Turf and Ornamental is a Group G Herbicide. Some naturally occurring weed biotypes resistant to Ronstar Turf and Ornamental and other inhibitors of protoporphyrinogen oxidase herbicide may exist through normal genetic variability in any weed population. The resistant individuals can eventually dominate the weed population if these herbicides are used repeatedly. These resistant weeds will not be controlled by Ronstar Turf and Ornamental or other inhibitors of protoporphyrinogen oxidase herbicides. Since the occurrence of resistant weeds is difficult to detect prior to use, Bayer CropScience accepts no liability for any losses that may result from the failure of Ronstar Turf and Ornamental to control resistant weeds.

**PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT**

Dangerous to fish. DO NOT contaminate streams, rivers or waterways with the chemical or used containers.

**STORAGE AND DISPOSAL**
Store in the closed, original container in a dry, cool, well-ventilated area out of direct sunlight. Store in a locked room or place away from children, animals, food, feedstuffs, seed and fertilisers. Shake empty into granule applicator. DO NOT dispose of undiluted chemicals on site. Puncture or shred and bury empty containers in a local authority landfill. If no landfill is available bury the empty containers below 500 mm in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots. Empty containers and product should not be burnt.

**SAFETY DIRECTIONS**
Avoid contact with eyes. Do not inhale dust. Wash hands after use.

**FIRST AID**
If poisoning occurs contact a doctor or Poisons Information Centre (phone 13 11 26).

**SAFETY DATA SHEET**
Additional information is listed in the Safety Data Sheet available from bayeres.com.au.

**Exclusion of Liability**
This product must be used strictly as directed, and in accordance with all instructions appearing on the label and in other reference material. So far as it is lawfully able to do so, Bayer CropScience Pty. Ltd. accepts no liability or responsibility for loss or damage arising from failure to follow such directions and instructions.

Batch Number:      DOM:
### Ronstar® Turf and Ornamental Herbicide

**ACTIVE CONSTITUENT:** 20 g/kg OXADIAZON

**GROUP G HERBICIDE**

For the control of certain weeds in Woody Ornamental Shrubs and Trees in nurseries or in Turf as specified in the Directions for Use table.

The bag must not be sold separately.  
Do not destroy box while product still remains.  
Before using product, read directions on outer pack.  
Sale of this bag, except in outer pack, is illegal.

**STORAGE AND DISPOSAL:** Store in the closed, original container in a dry, cool, well-ventilated area out of direct sunlight. Store in a locked room or place away from children, animals, food, feedstuffs, seed and fertilisers. Shake empty into granule applicator. DO NOT dispose of undiluted chemicals on site. Puncture or shred and bury empty containers in a local authority landfill. If no landfill is available bury the empty containers below 500 mm in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots. Empty containers and product should not be burnt.

**SAFETY DIRECTIONS:** Avoid contact with eyes. Do not inhale dust. Wash hands after use.

**FIRST AID:** If poisoning occurs contact a doctor or Poisons Information Centre (phone 13 11 26).

**SAFETY DATA SHEET:** Additional information is listed in the Safety Data Sheet available from bayeres.com.au.

APVMA Approval No.: 62461/15kg/1107

NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.

GENERAL INSTRUCTIONS

Fungicide Resistance Warning

Signature Stressgard Systemic Fungicide is a member of the Multi-site activity group of fungicides. For fungicide resistance management the product is a Group 33 fungicide. Some naturally occurring individual fungi resistant to Signature Stressgard Systemic Fungicide and other Group 33 fungicides may exist through normal genetic variability in any fungal population. The resistant individuals can eventually dominate the fungal population if these fungicides are used repeatedly. These resistant fungi will not be controlled by Signature Stressgard Systemic Fungicide or other Group 33 fungicides, thus resulting in a reduction in efficacy and possible yield loss. Since the occurrence of resistant fungi is difficult to detect prior to use, Bayer CropScience accepts no liability for any losses that may result from the failure of Signature Stressgard Systemic Fungicide to control resistant fungi.

Mixing

Fill the spray tank to at least half the desired amount with clean water and commence agitation. Add the required quantity of Signature Stressgard directly to the water and complete filling to the final volume. Continue agitation. DO NOT make a slurry or paste prior to adding to the tank.

Application: Turf only - Apply 5 L to 20 L of water per 100 m².
Note on ornamentals
Signature Stressgard has been used on a wide range of ornamental plant species without damage. However, some species and varieties are particularly sensitive to chemical products. It is advisable to treat only a small number of plants first, in order to determine their reaction to the product, before large scale use.

Compatibility
Signature Stressgard is compatible with a number of fungicides. If unsure, a jar test is recommended to determine physical compatibility. Always add Signature Stressgard to the mixture last. With any mixture, constantly agitate prior to and during application. It is not recommended to mix this product with more than one additional pesticide in the tank. Always test mixtures on a small number of plants before large scale use. As formulations of other manufacturers' products are beyond the control of Bayer CropScience Pty Ltd, all mixtures should be tested prior to mixing commercial quantities.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT
Dangerous to fish. Do not contaminate streams, rivers or waterways with the chemical or used containers.

STORAGE AND DISPOSAL
Keep out of reach of children. Store in the closed, original container in a cool, well-ventilated area. Do not store for prolonged periods in direct sunlight. Triple or preferably pressure rinse containers before disposal. Add rinsings to spray tank. Do not dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush, or puncture and bury empty containers in a local authority landfill. If no landfill is available, bury the containers below 500 mm in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots. Empty containers and product should not be burnt.

SAFETY DIRECTIONS
May irritate the eyes. Avoid contact with eyes and skin. Avoid inhaling dust or spray mist. Wash hands after use.

FIRST AID
If poisoning occurs, contact a doctor or Poisons Information Centre (Phone Australia 13 11 26).

SAFETY DATA SHEET
Additional information is listed in the Safety Data Sheet.
Exclusion of Liability

This product must be used strictly as directed, and in accordance with all instructions appearing on the label and in other reference material. So far as it is lawfully able to do so, Bayer CropScience Pty Ltd accepts no liability or responsibility for loss or damage arising from failure to follow such directions and instructions.

SilvaShield Injectable

Tree Insecticide

ACTIVE CONSTITUENT: 200 g/L IMIDACLOPRID

GROUP 4A INSECTICIDE

1 L
A soluble liquid formulation for use via trunk or stem injection for the control of a range of insect pests in trees as per the directions for use

(label code)
AUXILLARY PANEL (ONE PIECE LABEL)

STORAGE AND DISPOSAL:
Store in the closed, original container in a cool, well-ventilated area. DO NOT store for prolonged periods in direct sunlight. Triple-rinse containers before disposal. Pour rinseate onto soil around base of treated tree away from edible plants. DO NOT dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush or puncture and deliver empty packaging to an approved waste management facility. DO NOT burn empty containers or product. DO NOT re-use empty containers for any other purpose.

SAFETY DIRECTIONS:
Harmful if swallowed. May irritate the eyes and skin. Avoid contact with eyes and skin. When preparing product for use, wear cotton overalls buttoned to the neck and wrist (or equivalent clothing) and elbow-length chemical resistant gloves. Wash hands after use. After each day's use, wash gloves and contaminated clothing.

FIRST AID:
If poisoning occurs contact a doctor or Poisons Information Centre. Phone Australia 131126, New Zealand 0800 764 766.

MATERIAL SAFETY DATA SHEET
Additional information is listed in the Material Safety Data Sheet which is available at www.environmentalscience.bayer.com.au.

Exclusion of Liability
This product must be used strictly as directed, and in accordance with all instructions appearing on the label and in other reference material. So far as it is lawfully able to do so, Bayer CropScience Pty Ltd accepts no liability or responsibility for loss or damage arising from failure to follow such directions and instructions.

NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION

INSECTICIDE RESISTANCE WARNING:

GROUP 4A INSECTICIDE

For insecticide resistance management SilvaShield is a Group 4A insecticide. Some naturally occurring insect biotypes resistant to SilvaShield and other Group 4A insecticides may exist through normal genetic variability in any insect population. The resistant individuals can eventually dominate the insect population if SilvaShield or other Group 4A insecticides are used repeatedly. The effectiveness of SilvaShield on resistant individuals could be significantly reduced. Since the occurrence of resistant individuals is difficult to detect prior to use, Bayer CropScience accepts no liability for any losses that may result from the failure of this product to control resistant insects. SilvaShield Insecticide may be subject to specific resistance management strategies. For further information contact your local supplier or Bayer Environmental Science representative.
AUXILLARY PANEL (ONE PIECE LABEL)

**General Instructions:**

No dilution is required; this product is intended to be applied undiluted directly into the trunk or branches of trees in order to provide systemic control of insect pests.

 SilvaShield Injectable Tree Insecticide can be used as directed on ornamental trees in residential areas, business and office complexes, shopping complexes, multi-family residential complexes, golf courses, airports, cemeteries, parks, playgrounds, and athletic fields. SilvaShield also can be used in commercial forestry production, nurseries, greenhouses, and in state, federal, county and local recreational forests.

The active ingredient in SilvaShield Injectable Tree Insecticide has sufficient residual activity so that applications can be made preceding the attack of the trees by target pests. SilvaShield Injectable also controls existing infestations of most labelled pests. If the level of infestation is severe, the high label rate for the targeted pest is recommended.

Systemic activity occurs only after the active ingredient is translocated upwards in the tree. In some cases, translocation can take 10 days or longer, depending on the transpiration rate of the treated plant. The need for an application can be based on historical monitoring of the site, previous records or experiences, current season adult trapping or other methods. For best results (i.e., to ensure uptake), application should be made when the tree is actively transpiring. Less than satisfactory results, including slow or reduced impact on beetles and larvae, may occur if trees are suffering from lack of moisture, thereby reducing translocation of the active ingredient.

For best results, dedicated injection equipment is recommended.

**Application Equipment**

SilvaShield Injectable Tree Insecticide can be applied with a variety of trunk injection devices. To minimise the possibility of corrosion of equipment, use chemically-resistant components or ensure thorough cleaning after use. For all injector systems, read carefully and follow all manufacturers' directions for use.

**Drilling the hole**

With most injector systems, it is necessary to pre-drill holes prior to insertion of the applicator device. Holes should be drilled deep enough to permit transport of SilvaShield upwards in the vascular tissue. Take note of drill hole spacing in the critical comments of the directions for use.

To determine the number of injection holes needed, measure the tree circumference at 1.3m above the ground. Divide the circumference (as measured in centimetres) by the recommended hole spacing to determine the number of holes needed. Initial injector sites should be in the active sapwood. If a single hole cannot accept its full dose, the dose may be divided among the other initial injection holes. Spacing of injection holes should be vertically and horizontally staggered so that they are not aligned with other holes.

**Compatibility**

No information is available that indicates physical compatibility with other products. Mixing SilvaShield Injectable with other products cannot therefore be recommended.

**PROTECTION OF LIVESTOCK:** This product is highly toxic to bees exposed to direct treatment or residues on flowering trees and shrubs. DO NOT use on trees which are likely to be used by commercial beehives.

**PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT:** DO NOT contaminate streams, rivers or waterways with the chemical or used containers. This product is highly toxic to bees exposed to direct treatment or residues on flowering trees and shrubs. To minimise risk, ensure injection occurs after flowering in species that are pollinated by bees.

<th>Critical Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Turf</td>
<td>Broadleaf weeds including: White Clover (Trifolium repens) Plantain (Plantago lanceolata) Capeweed (Arctotheca calendula) Cat's ear (Hypochoeris radicata) Bin-dii (Jo-Jo, Onehunga) Cudweed (Gnaphalium spp.) Creeping oxalis (Oxalis corniculata)</td>
<td>5 L in 200-500 L water/ha</td>
<td>Apply to actively growing weeds. Transient discolouration may occur on kikuyu and carpet grass and Queensland blue couch. Varietal differences in certain buffalo grasses (eg. ST85) may produce more pronounced effects and it is recommended that small areas be tested for turf safety before large-scale application occurs. Avoid exceeding application rates through overlapping sprayed areas. Use a surfactant for difficult to wet weeds.</td>
</tr>
</tbody>
</table>

NOT TO BE USED FOR ANY PURPOSE OR IN ANY MANNER CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.

GENERAL INSTRUCTIONS
For best results the turf and weeds should be actively growing at the time of treatment. Complete weed death may take up to 6 weeks. Faster results can be expected on smaller weeds. Due to residual effects of diflufenican, overseeding treated areas within 3 months of application may inhibit establishment of the turfgrass.

Mixing
Shake original container before use. Agitate continuously to ensure thorough mixing before and during application. Only mix sufficient chemical for each day’s work. Surfactants (if used) should be added after Spearhead and water are mixed when the spray-tank is almost full.

Mowing
Avoid mowing during the 3 to 4 days preceding or following treatment.

Cleaning Spray Equipment
THOROUGHLY CLEAN ALL APPLICATION EQUIPMENT AFTER USE. Rinse water should be discharged onto a designated disposal area or if unavailable onto unused land away from desirable plants and water-courses.

Partial Cleaning (before spraying tolerant turf): After using Spearhead, empty the tank completely and drain the whole system. Thoroughly wash inside the tank with a pressure hose. Quarter fill the tank with clean water and circulate through the pump, line, hoses and nozzles. Drain and repeat procedure twice.

Complete cleaning (before spraying susceptible plants): After using Spearhead empty the tank completely and drain the whole system. Thoroughly wash inside the tank with a pressure hose. Quarter fill the tank with clean water and circulate through the pump, line, hoses and nozzles, then drain. Quarter fill the tank again and add an alkaline detergent at 500 mL/100 L water and circulate through
the system for at least 15 minutes. Drain, remove filters and nozzles and clean separately. Rinse inside the tank thoroughly using a pressure hose and flush system with clean water.

**RESISTANCE WARNING**

Spearhead Selective Herbicide is a member of the nicotinanilide, phenoxy and pyridine groups of herbicides. Spearhead Selective Herbicide has the inhibitors of carotenoid biosynthesis and disruptor of cell growth modes of action. For weed resistance management Spearhead is a group F and I herbicide. Some naturally occurring weed biotypes resistant to Spearhead and other Group F and I herbicides may exist through normal genetic variability in any weed population. The resistant individuals can eventually dominate the weed population if these herbicides are used repeatedly. These resistant weeds will not be controlled by Spearhead or other Group F or I herbicides. Since the occurrence of resistant weeds is difficult to detect prior to use, Bayer CropScience accepts no liability for any losses that may result from the failure of Spearhead Selective Herbicide to control resistant weeds.

**COMPATIBILITY**

No information is available that indicates physical compatibility with other products. Tank-mixing other products with Spearhead cannot therefore be recommended. As formulations of other manufacturers' products are beyond the control of Bayer CropScience, all mixtures should be tested prior to mixing commercial quantities.

**PRECAUTION**

**Re-Entry Period**

Do not allow entry into treated areas until the spray has dried. When prior entry is necessary wear cotton overalls buttoned to the neck and wrist (or equivalent clothing) and chemical resistant gloves. Clothing must be laundered after each day's use.

**Manual handling of turf**

Hand-weeding and transplanting should not be performed before 2 weeks after spray application, unless workers wear overalls (or equivalent clothing) and chemical resistant gloves.

**PROTECTION OF CROPS, NATIVE AND OTHER NON-TARGET PLANTS**

DO NOT apply under weather conditions or from spraying equipment that may cause spray to drift onto nearby susceptible plants/crops, cropping lands or pastures. Spray drift from Spearhead application may cause injury to herbaceous plants, vegetables, fruit crops, vines, ornamentals and trees.

DO NOT use clippings from treated areas for mulch around vegetables or fruit trees.

**PROTECTION OF LIVESTOCK**

DO NOT graze treated turf or feed turf clippings from any treated area to poultry or livestock.

**PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT**

Dangerous to fish and other aquatic life. DO NOT contaminate streams, rivers or waterways with the chemical or used containers.

**STORAGE AND DISPOSAL**

Store in the closed, original container in a dry, cool, well-ventilated area. Do not store for prolonged periods in direct sunlight. Triple or preferably pressure rinse containers before disposal. Add rinsings to the spray tank. Do not dispose of undiluted chemicals on-site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush, or puncture and deliver empty packaging to an approved waste management facility. If an approved waste management facility is not available bury the empty packaging 500 mm below the surface in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots in compliance with relevant local, State or Territory government regulations. DO NOT burn empty containers or product. DO NOT re-use container for any other purpose.
SAFETY DIRECTIONS
Harmful if swallowed. Will damage eyes. Will irritate skin. Avoid contact with eyes and skin. If product in eyes, wash it out immediately with water. Wash hands after use. When opening the container, preparing the spray and using the prepared spray wear cotton overalls buttoned to the neck and wrist, washable hat, elbow-length PVC gloves and goggles. After each days use wash gloves, goggles and contaminated clothing.

FIRST AID
If poisoning occurs, contact a doctor or Poisons Information Centre. Phone 13 11 26.

SAFETY DATA SHEET
Additional information is listed in the Safety Data Sheet.

Exclusion of Liability
This product must be used strictly as directed, and in accordance with all instructions appearing on the label and in other reference material. So far as it is lawfully able to do so, Bayer CropScience Pty Ltd accepts no liability or responsibility for loss or damage arising from failure to follow such directions and instructions.

<th>CRITICAL COMMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Domestic, commercial, industrial and public buildings and facilities</td>
<td>Ants</td>
<td>Non-porous surfaces: 50 mL / up to 5 L water / 100 m² Porous surfaces or through use of power equipment: 50 mL / up to 10 L water / 100 m²</td>
<td>DIRECT NEST TREATMENT: Where possible locate the nest and spray directly into nest entrances. Penetration of insecticide can be assisted by pre-wetting sandy and porous soils with water. A thorough soaking treatment with insecticide mixture is required to destroy the nest. TREATMENT WHEN NESTS CANNOT BE LOCATED: Apply to all ant trails and areas where ants are foraging. Search for ants underneath materials (e.g. rocks, timber) and apply to these areas. Where indoor infestation has been identified it is recommended that an external perimeter treatment be installed (refer below) and that indoor areas are treated with a suitably registered bait product such as from the Maxforce ant bait range. EXTERNAL PERIMETER TREATMENTS: Apply to all potential entrance points of the structure (e.g. cracks and crevices in brickwork and gaps in timber weatherboards). Treat the outside of the structure; walls, and around doors, windows, and other areas where ants are active or may enter or hide. Ensure application in wall voids or other enclosed cavities is made with spray nozzle adjusted to produce a fine mist in order to avoid run-off. Treat the soil, turf or other ground covering adjacent to the structure (in a band up to 3 metres wide) where ants are seen, have been found, or can find shelter.</td>
</tr>
<tr>
<td>Domestic, commercial, industrial and public buildings and facilities</td>
<td>Cockroaches</td>
<td>Conduct a thorough inspection and apply to known and potential cockroach harboursages. A barrier application around areas where cockroach infestations may be originating is also suggested. NOTE: The use of an Insect Growth Regulator (such as STARYCIDE® Insect Growth Regulator) is considered a useful supplementary treatment for cockroach control when cockroach infestation is severe. Repeat application as required. Where application of a spray is not suitable it is recommended that a suitably registered gel such as from the MAXFORCE® Gel range be applied as per the registered label on that product.</td>
<td></td>
</tr>

<td>Mosquitoes and flies</td>
<td>Non-porous surfaces: 50 mL / up to 5 L water / 100 m² Porous surfaces or through use of power equipment: 50 mL / up to 10 L water / 100 m²</td>
<td>Spray surfaces where flies and mosquitoes are known to come to rest. Flies – include external surfaces that are exposed to the morning sun. Mosquitoes – spray walls, awnings, fences and vegetated areas in proximity to buildings. DO NOT apply to edible plants. NOTE: The perception of the level of control of flying insects achieved within any given area treated with a residual surface spray will be affected by the extent of in-migration of individuals from external (untreated) areas. A residual surface spray will only control those insects that alight on the treated surfaces and therefore complete elimination of flying insects from the treated area should not necessarily always be expected.</td>

Non-porous surfaces: 50 mL / up to 5 L water / 100 m² Porous surfaces or through use of power equipment: 50 mL / up to 10 L water / 100 m²
**SITUATION** | **PEST** | **RATE** | **CRITICAL COMMENTS**
--- | --- | --- | ---
Domestic, commercial, industrial and public buildings and facilities (including but not limited to farm buildings, offices, storerooms, private houses and external areas associated with such establishments) | Millipedes | Non-porous surfaces: 50 mL / up to 5 L water / 100 m² | Apply as a coarse spray to infested areas. Recommended for use on non-porous surfaces only.
Paper nest wasps | | Porous surfaces or through use of power equipment: 50 mL / up to 10 L water / 100 m² | Apply diluted spray to the point of run-off directly to the paper nest ensuring thorough and even coverage. When all adult wasps have been knocked down the nest may be safely removed from the structure.
Spiders | | | Apply to areas where spiders are known to occur, their webbing and areas where spiders may hide. It is recommended that any webbing is left in place for a few days after application to optimise efficacy.

**Internal areas and surrounds of domestic, commercial, industrial and public buildings and facilities**

Fleas | Non-porous surfaces: 50 mL / up to 5 L water / 100 m² | Clean and vacuum infested areas and dispose of dust collected in the garbage in a sealed plastic bag. Lightly spray infested areas concentrating on areas under furniture etc. NOTE: The use of an Insect Growth Regulator (such as Starycide Insect Growth Regulator) is considered a useful supplementary treatment for flea control. Treat pets with a suitably registered flea control product. See also the note on application to carpets below.

**External areas and surrounds of domestic, commercial and public buildings and structures, untended verges, surrounds of sporting venues etc. and other areas where ticks are found.**

Ticks (not paralysis ticks) | Non-porous surfaces: 50 mL / up to 5 L water / 100 m² | Apply to outside surfaces of buildings and surrounds including but not limited to foundations, soil, turf, trunks of woody ornamentals and other areas where ticks congregate or have been seen. This treatment is intended to control ticks which are present at the time of application. Repeat application may be required during times of high tick activity. When used in domestic garden situations where domestic pets are present, it is recommended that the animals also be treated with an appropriately registered ectoparasiticide.

---

**NOT TO BE USED FOR ANY PURPOSE OR IN ANY MANNER CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.**

**RE-ENTRY**

DO NOT enter treated areas until the spray has dried, unless wearing cotton overalls buttoned to the neck and wrist (or equivalent clothing) and chemical resistant gloves. Clothing must be laundered after each day’s use.

**GENERAL INSTRUCTIONS**

**Mixing**

Add the required quantity of **Tempo Xtra** to water while stirring.

**Application**

DO NOT spray the moving parts of any machinery, electric motors or switchgear with the water-based product.

**Compatibility**

**Tempo Xtra** is compatible with Starycide Insect Growth Regulator and Merit Turf and Ornamental Insecticide.

**INSECTICIDE RESISTANCE WARNING**

For insecticide resistance management **Tempo Xtra** is a Group 3A & 4A insecticide. Some naturally occurring insect biotypes resistant to **Tempo Xtra** and other Group 3A and 4A insecticides may exist through normal genetic variability in any insect population. The resistant individuals can eventually dominate the insect population if **Tempo Xtra** or other Group 3A and 4A insecticides are used repeatedly. The
effectiveness of Tempo Xtra on resistant individuals could be significantly reduced. Since occurrence of resistant individuals is difficult to detect prior to use, Bayer CropScience Pty. Ltd. accepts no liability for any losses that may result from failure of Tempo Xtra to control resistant insects. For further information on managing insecticide resistance contact your local supplier or Bayer Environmental Science representative.

PRECAUTIONS
For surface treatment only – DO NOT spray into the atmosphere using foggers or other devices designed to create an aerosol.

DO NOT spray directly on humans, exposed food or food utensils or food preparation areas.

DO NOT spray clothing.

Avoid contact of spray with timber to which a stain is subsequently to be applied, unless the owner is notified that the timber will need additional preparation, consistent with that if water alone had contacted the timber. (Evidence of water contact on timber is sometimes only evident once the stain has been applied).

BEFORE USE - Remove or cover all exposed foodstuffs. Cover all dishes and utensils and surfaces where food is prepared.

AFTER USE - Thoroughly ventilate treated areas. Clean up thoroughly before processing/serving resumes.

NOTE ON APPLICATION TO CARPETS
Whilst carpets are regarded as porous surfaces, excessive liquid application may produce water-stains and therefore the non-porous surface rate should be adopted if possible. Hence for short pile carpet, the 5 L dilution rate (per 100 m²) should be sufficient. However, for long pile or shag carpet, the 10 L dilution rate (per 100 m²) may be required, to ensure effective penetration and application to all of the carpet-pile. Since carpets vary in their thickness, colour and material it is recommended that a small, inconspicuous area of carpet be sprayed and allowed to dry first to ensure that staining will not occur. Allow treated carpets to dry before resuming activity on them.

NOTE ON ORNAMENTALS AND NATIVE PLANTS
TEMPO XTRA has been used on a wide range of ornamental plant species without damage. However, some species and varieties are particularly sensitive to chemical sprays and as this is often related to local conditions it is advisable to treat only a small number of plants first, in order to ascertain their reaction before treating the whole crop.

PROTECTION OF CROPS, NATIVE AND OTHER NON-TARGET PLANTS
Refer to Note on Ornamentals and Native Plants.

PROTECTION OF LIVESTOCK
Dangerous to bees. DO NOT spray any plants in flower while bees are foraging. DO NOT graze treated turf or feed turf clippings from any treated area to poultry or livestock.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT
Toxic to mammals. Very toxic to aquatic life. DO NOT contaminate wetlands or watercourses with this product or used containers. Cover fish tanks before using. Toxic to beneficial arthropods. Not compatible with integrated pest management (IPM) programs utilising beneficial arthropods. Minimise spray drift to reduce harmful effects on beneficial arthropods in non-crop areas.

STORAGE AND DISPOSAL: Store in tightly closed, original container in a safe, well ventilated area, as cool as possible. DO NOT store for prolonged periods in direct sunlight. Triple rinse containers before disposal. Add rinsings to spray tank. DO NOT dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush, or puncture and deliver empty packaging to an approved waste management facility. If an approved waste management facility is not available, bury the empty packaging 500 mm below the surface in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots, in compliance with relevant Local, State or Territory government regulations. DO NOT burn empty containers or product. Do not re-use empty containers for any other purpose.

SAFETY DIRECTIONS
May irritate the skin and eyes. Avoid contact with skin and eyes. When preparing product for use and using the prepared spray, wear cotton overalls over normal clothing buttoned to the neck and wrist and elbow
length chemical-resistant gloves. Wash hands after use. After each day’s use wash gloves and contaminated clothing.

**FIRST AID**
If poisoning occurs, contact a doctor or Poisons Information Centre. Phone Australia 13 11 26; New Zealand 0800 764 766. Remove from contaminated area. Apply artificial respiration if not breathing.

**SAFETY DATA SHEET**
Additional Information is listed in the Safety Data Sheet which may be found at www.environmentalscience.bayer.com.au.

**Exclusion of Liability**
This product must be used strictly as directed, and in accordance with all instructions appearing on the label and in other reference material. So far as it is lawfully able to do so, Bayer CropScience Pty Ltd accepts no liability or responsibility for loss or damage arising from failure to follow such directions and instructions.

STORAGE AND DISPOSAL
Store in the closed, original container in a cool, well-ventilated area. DO NOT store for prolonged periods in direct sunlight. Triple or preferably pressure rinse containers before disposal. Add rinsings to spray tank. DO NOT dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush, or puncture and deliver empty packaging to an approved waste management facility. If an approved waste management facility is not available bury the empty packaging 500 mm below the surface in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots, in compliance with relevant Local, State or Territory government regulations. DO NOT burn empty containers or product.

SAFETY DIRECTIONS
May irritate the eyes. Will irritate the skin. Repeated exposure may cause allergic disorders. Avoid contact with eyes and skin. If product on skin, immediately wash area with soap and water. If product in eyes, wash it out immediately with water. When opening the container, preparing spray and using the product wear cotton overalls buttoned to the neck and wrist (or equivalent clothing) and elbow-length chemical-resistant gloves. Wash hands after use. After each day's use wash gloves and contaminated clothing.

FIRST AID: If poisoning occurs contact a doctor or Poisons Information Centre. Phone Australia 13 11 26; New Zealand 0800 764 766. If swallowed, do NOT induce vomiting. Give a glass of water.

SAFETY DATA SHEET
Additional information is listed in the Safety Data Sheet which may be found at www.bayeres.com.au.

EXCLUSION OF LIABILITY
This product must be used strictly as directed, and in accordance with all instructions appearing on the label and in other reference material. So far as it is lawfully able to do so, Bayer CropScience Pty Ltd accepts no liability or responsibility for loss or damage from failure to follow such directions and instructions.

DIRECTIONS FOR USE

RESTRAINTS
DO NOT apply with aircraft.
DO NOT apply through any type of irrigation equipment.
DO NOT apply with a nozzle height greater than 50cm above the ground.
DO NOT apply to turf or weeds under stress.
DO NOT apply on turf exhibiting injury from previous applications of other products.
DO NOT apply to turf which is not well established.
DO NOT apply if heavy rain has been forecast within 48 hours.
DO NOT apply to waterlogged soil.
DO NOT apply within two weeks of couchgrass sprigging.
DO NOT apply within one week prior to overseeding couchgrass with a cool season grass such as ryegrass, as some temporary stunting may occur for up to two weeks.

SPRAY DRIFT RESTRAINTS
DO NOT apply with spray droplets smaller than a MEDIUM spray droplet size category according to nozzle manufacturers specifications that refer to the ASAE S572 Standard or the BCPC Guideline.
DO NOT apply when wind speed is less than 3 or more than 20 km per hour as measured at the application site.
DO NOT apply during surface temperature inversion conditions at the application site.

Users of this product MUST make an accurate written record of the details of each spray application within 24 hours following application and KEEP this record for a minimum of 2 years. The spray application details that must be recorded are: 1 date with start and finish times of application; 2 location address and paddock/s sprayed; 3 full name of this product; 4 amount of product used per hectare and number of hectares applied to; 5 crop/situation and weed/pest; 6 wind speed and direction during application; 7 air temperature and relative humidity during application; 8 nozzle brand, type, spray angle, nozzle capacity and spray system pressure measured during application; 9 name and address of person applying this product. (Additional record details may be required by the state or territory where this product is used.)

MANDATORY NO-SPRAY ZONES
DO NOT apply if there are aquatic or wetland areas including aquacultural ponds, surface streams and rivers within 80 metres downwind from the application area.
DO NOT apply if there are sensitive crops, gardens, landscaping vegetation, protected native vegetation or protected animal habitat within 30 metres downwind from the application area.

**NOT TO BE USED FOR ANY PURPOSE OR IN ANY MANNER CONTRARY TO THIS LABEL UNLESS AUTHORIZED UNDER APPROPRIATE LEGISLATION.**

### GENERAL INSTRUCTIONS

TRIBUTE Selective Turf Herbicide is a selective sulfonylurea herbicide. It is predominantly a foliar herbicide with less activity via the soil. TRIBUTE will not reliably control weeds that emerge after spraying. Best results are achieved when the product is applied under good growing conditions and to weeds and turf which are actively growing and not under stress. Avoid mowing during the three to four days preceding or following treatment. Application to very dry sandy soils followed by soaking rainfall may cause turf damage. Turf damage may also be increased in highly alkaline soils (soil pH >8.5 as determined by soil in water suspension). Avoid excessive mechanical disruptions such as aerification and verticutting within one week prior to or after application.

### RESISTANT WEEDS WARNING

**GROUP B HERBICIDE**

TRIBUTE Selective Turf Herbicide is a member of the sulfonylurea group of herbicides and has the inhibitor of ALS mode of action. For weed resistance management TRIBUTE is a Group B herbicide. Some naturally-occurring weed biotypes resistant to TRIBUTE, and other Group B herbicides, may exist through normal genetic variability in any weed population. These resistant individuals can eventually dominate the weed population if these herbicides are used repeatedly. These resistant weeds will not be controlled by TRIBUTE or other Group
B herbicides. DO NOT rely exclusively on TRIBUTE for weed control. Use as part of an integrated weed management program involving herbicides with other modes of action and non-chemical methods of control. Since occurrence of resistant weeds is difficult to detect prior to use Bayer CropScience Pty. Ltd. accepts no liability for any losses that may result from the failure of TRIBUTE to control resistant weeds.

MIXING
Ensure that the spray tank is completely clean prior to mixing. Half fill the spray tank with water, then with agitators in motion, add the correct amount of TRIBUTE directly into the spray tank. Complete filling the tank with agitators in motion. Agitation must continue before and during spraying. If pH of water carrier is less than 5.5, use a buffer solution to raise pH to meet 7.0. DO NOT mix TRIBUTE with acid-forming compounds in the spray vat. DO NOT leave spray mix standing in the vat overnight.

APPLICATION
Ensure spraying equipment is properly calibrated before use. Ensure that complete and even spray coverage of all weeds is achieved. DO NOT overlap sprayed areas.

Broadcast Application:
Aim to apply a thorough and even coverage of spray to the target weed. Dense stands of weeds should be thoroughly wetted with spray. Incomplete coverage may result in poor control. Equipment set-up should be such that adequate coverage, penetration and volume of spray liquid can be achieved while the potential for off-target movement is minimised.

Application should be at the recommended rate in sufficient water to give thorough coverage of weeds. Apply in a minimum of 200 L/ha through nozzles that will deliver a MEDIUM spray droplet as defined by ASAE S572 Standard or BCPC Guideline. Use higher spray volumes (up to 500 L/ha) for dense weed populations or under adverse growing conditions.

The product should dry on the leaf surface prior to allowing traffic on the treated area. Risk to sensitive grasses such as bentgrass, ryegrass, and Poa trivialis adjacent to TRIBUTE applications is decreased when the soil is at less than field capacity. DO NOT apply if heavy rain has been forecast within 48 hours. DO NOT apply to waterlogged soil. TRIBUTE is foliar absorbed; irrigation is not recommended immediately after application. However, for the next two mornings after application, if dew is present, irrigate lightly (3-5 mm) prior to allowing traffic each day in the area. Avoid water run-off during these irrigation cycles. DO NOT irrigate to the point of run-off within 7 days of application.

SPRAYER CLEAN UP
The sprayer must be thoroughly decontaminated before being used again to spray susceptible plants or turf. Ensure that the following operation is carried out in an area that is clear of waterways, desirable vegetation and tree roots, and preferably in an area where drainings can be contained.

1. Drain sprayer completely and wash out tank, boom and hoses with clean water.
2. Drain again.
3. Fill the tank with clean water and add 300 mL of chlorine bleach (containing 4% chlorine) per 100 L of water with agitation running.
4. Flush some bleach solution through booms and hoses and allow remainder to agitate in tank for 10 minutes.
5. Remove nozzles and filters and leave to soak in a bleach solution of 500 mL per 10 L of water while tank cleaning is in progress.
6. Briefly run the pump at periodic intervals to refresh chlorine solution in spray lines.
7. Drain tank and repeat the procedure of flushing with bleach solution.
8. Flush the tank, boom and hoses with clean water.

COMPATIBILITY
No information is available that indicates physical compatibility with products other then those detailed in the Direction for Use table. Tank-mixing other products with TRIBUTE Selective Turf Herbicide cannot therefore be recommended. As formulations of other manufacturers’ products are beyond the control of Bayer, all mixtures should be tested prior to mixing commercial quantities. Note that organophosphate insecticides should not be
tank-mixed or applied within 7 days prior or 3 days after application as there may be increased potential for turf injury.

**PRECAUTIONS**

**RE-ENTRY PERIOD**

DO NOT allow entry into treated areas until the spray has dried, unless wearing cotton overalls buttoned to neck and wrist (or equivalent clothing), chemical resistant gloves. Clothing must be laundered after each day's use.

**PROTECTION OF CROPS, NATIVE AND OTHER NON-TARGET PLANTS**

DO NOT apply under weather conditions, or from spraying equipment, that may cause spray to drift onto nearby susceptible plants/crops, cropping lands or pastures. DO NOT use clippings from treated areas for mulch around vegetables or fruit trees.

**PROTECTION OF LIVESTOCK, WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT**

TRIBUTE Selective Turf Herbicide may kill or harm non-target beneficial invertebrates where IPM is practised. Very toxic to aquatic life. DO NOT contaminate streams, rivers or waterways with this product or used containers. DO NOT apply if heavy rain has been forecast within 48 hours. DO NOT graze treated turf or feed turf clippings from any treated area to poultry or livestock.
